We must make effort to level global playing field

The educated have always been the first to value education. As more of the world’s young people go to school, growing numbers knock at the doors of their country’s universities and colleges.

Two years ago, a World Bank-Unesco task force on higher education examined the crisis that this global thirst for learning was causing in most of the developing world’s higher education systems. Standards, it found, were often shockingly low — a product of outmoded curricula, poorly rewarded and motivated faculty, inadequate infrastructure and a failure to ensure quality control. Students were being short-changed and societies were losing out on the development dividend that advanced education offers.

The task force has called on developing country governments to act, and to do so fast. The more governments invest in basic and secondary education, the more they fuel demand for advanced courses. They must take stock of existing problems, analyse future patterns of demand and create balanced systems of education that call on the strengths of public and private providers.

Two years on, the task force’s work continues to make an impact. It has received most attention on the educational front line in developing countries. It has been read, discussed and, at times, vigorously criticised by policy-makers worldwide.

The most far-reaching work has been carried out in Pakistan, which has made an impressive commitment to higher education reform.

The analysis was deliberately global, offering a framework within which each country could start its unique national analysis. Pakistan’s response was inspired by the leadership of president, has accepted the recommendations and has initiated an implementation phase with two components. An emergency programme will apply a short sharp shock to reaking systems of management and governance. A long-term agenda will focus on curricular reform, science and technology and building relationships between the higher education system and the rest of society.

The spotlight remains on the higher education front line.

‘The benefits of higher education and the extent to which they accrue to an individual or society are still poorly understood’

Task-force member Syed Babar Ali, who brought together the country’s leading policy-makers, educationists and business people for a seminar in Lahore, at which the problems of higher education in Pakistan were explored. At the behest of the minister of education, the Pakistan task force was born. In January, after exhaustive study, it presented its findings, arguing for “the transformation of our institutions of higher education into world-class seats of learning, equipped to foster high-quality education, scholarship and research, to produce enlightened citizens with strong moral and ethical values”.

Pervez Musharraf, Pakistan’s
